DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1 to 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese patent 403031443 ("JP-443") or Japanese patent 06017188 ("JP-188") for the reasons set forth in the previous office action dated April 10, 2008.

Response to Arguments

- 3. Applicant's arguments filed August 11, 2008 have been fully considered but they are not persuasive.
- 4. It was argued that JP-188 does not describe claimed microstructure. It is the Examiner's position that the English abstract of JP-188 teaches bainitic steel containing island-shape martensite and austente at ≥ 5% which would suggest Applicant's claimed structure comprising bainite, martensite and 3 to 20% austenite.
- 5. It was argued that JP-188 examples contain no Ti, Al or N; and JP-443 is silent regarding the amount of N. It is the Examiner's position that Applicant's claim 1 recites Ti as optional, and also recites "N \leq .025%" and "Al \leq 0.9%" which have a lower limit of zero. Therefore none of these elements are required to be present. To distinguish claims over prior art, it is recommended to actively recite the presence of N and Al by incorporating language such as ---0 < N \leq 0.025%--- and ---0 < Al \leq 0.9%----.

6. If Applicant amends claims 1 to 5 according to Examiner's recommendation, then they would be allowable; and the non-elected claims 6 to 11 drawn to the method of making weldable component of structural steel which include all the limitation of product claim 1 will be rejoined and examined in accordance with MPEP 821.04.

- 7. Examiner, however, notes the following concerns with method claims 6 to 9:
- 8. The "critical bainitic velocity rate" recited by claims 6 to 9 is indefinite because it is not defined in the specification.
- 9. To add clarity to claims 10 and 11, "Vr" unit of measurement ((°C/ hour) needs to be recited as disclosed on page 4 of the specification.
- 10. Claims 6 and 10 are improper multiple dependent claims. They are dependent on claims 1 to 5, which includes multiple-dependent claim 4 which depends on claims 1 to 3.

Conclusion

11. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
